

DeTeWe Style 250

Cordless low radiation DECT-telephone with digital answering machine

This telephone lives up to its name. The simple stylish design is mainly accented by its slight line of the handset. With its classical colours black and silver it's perfect for every home or office. The integrated digital answering machine with a capacity of up to 15 minutes can be operated at the base station or via the handset. The Eco Mode function switches off the transmitting power of the base station in case the handset is in the base station.* While doing a phone call the transmitting power of the handset is reduced if the handset is close to the base station.

*Therefore it's necessary that only one handset is registered at the base station

ECO MODE (low radiation mode)

slim design
